#### DETAILED ACTION

### Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: "Suction muffler with a flow controller for compressor."

# Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 2-5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 2 recites, "... an imaginary circle..." (Claim 2, lines 6 and 12) which makes the claim unclear in context.

Application/Control Number: 10/672,986 Page 3

Art Unit: 3744

### Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Lee (5,888,055).

In regard to claim 1, Lee teaches a muffler body (41) having a suction port connected to a refrigerant suction pipe (29), a discharge port, and a resonator (Fig. 2); a muffler base connected to the discharge port for inducing refrigerant discharged through the discharge port to flow into a cylinder (27) (Fig. 2); and a flow controller (45) disposed in the suction port for controlling and steadying flow of refrigerant into the suction port (Fig. 2; C-3, L-19-5; C-4, L-1-10).

## Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Application/Control Number: 10/672,986

Art Unit: 3744

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 9. Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee (5,888,055), and further in view of Anderson, Jr. (5,081,847).

In regard to claim 2, Lee teaches most of the limitations of the claim but do not explicitly teach the plurality of refrigerant sub-paths. Anderson teaches a fixing member (60) having a main refrigerant path (70c), a plurality of refrigerant sub-paths (78) formed to vertically penetrate the fixing member (60) along and adjacent to the main refrigerant path (70c) at predetermined intervals; a movable member (74) having a first throughhole formed to correspond to the main refrigerant path, and a plurality of second through holes (74a) formed at predetermined intervals disposed in the space of the fixing member (60) to move between a first location for closing of refrigerant sub-paths (74a) and a second location for opening plurality of refrigerant sub-paths (74a); a resilient member (79) resiliently supporting the movable member and biasing that member towards the second location (Fig. 3 – Fig. 6; C-6, L-4-56). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Lee suction muffler so that it comprises the flow controller taught by Anderson in order to advantageously control the flow of the refrigerant more precisely to improve the efficiency of the compressor.

In regard to claim 5, Anderson teaches that the resilient member (79) is a compression coil spring (C-6, L-43).

### **Double Patenting**

10. Claims 1-5 of this application conflict with claims 1-5 of Application No.

10427781. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.

### Allowable Subject Matter

11. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

- 12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huseyin Koca whose telephone number is (571) 272-3048. The examiner can normally be reached on Monday Friday 9:00AM to 4:00PM.
- 13. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
